Лабораторна робота №2.2

з дисципліни «Алгоритми і структури даних»

Виконала: Студентка групи IM-12 Миць Вікторія Ігорівна Номер у списку групи: 19 Перевірила: Молчанова А. А

Завдання:

- 1. Створити список з n (n>0) елементів (n вводиться з клавіатури), якщо інша кількість елементів не вказана у конкретному завданні.
- 2. Тип ключів (інформаційних полів) задано за варіантом.
- 3. Значення елементів списку взяти самостійно такими, щоб можна було продемонструвати коректність роботи алгоритму програми. Введення значень елементів списку можна виконати довільним способом (випадкові числа, формування значень за формулою, введення з файлу чи з клавіатури).
- 4. Вид списку (черга, стек, дек, прямий однозв'язний лінійний список, обернений однозв'язний лінійний список, двозв'язний лінійний список, однозв'язний кільцевий список, двозв'язний кільцевий список) вибрати самостійно з метою найбільш доцільного рішення поставленої за варіантом задачі.
- 5. Виконати над створеним списком дії, вказані за варіантом, та коректне звільнення пам'яті списку.
- 6. При виконанні заданих дій, виводі значень елементів та звільненні пам'яті списку вважати, що довжина списку (кількість елементів n чи 2n) <u>невідома</u> на момент виконання цих дій.
- 7. Повторювані частини алгоритму необхідно оформити у вигляді процедур або функцій (для створення, обробки, виведення та звільнення пам'яті списків) з передачею списку за допомогою параметра(ів).

Варіант 19:

Задано два списки, список S1 довжиною 2n елементів і список S2 довжиною n елементів. Ключами елементів обох списків є натуральні числа. Вставити список S2 у середину списку S1, не використовуючи додаткових структур даних, крім простих змінних (тобто «на тому ж місці»).

Код алгоритму на С:

```
#include <stdlib.h>
#include <stdio.h>
typedef struct node
    unsigned int value;
    struct node *next;
} node_t;
node_t *create_list(unsigned int value)
    node_t *head = NULL;
    head = (node_t *) malloc(sizeof(node_t));
    if (head == NULL)
        return NULL;
    }
    head->value = value;
    head->next = NULL;
    return head;
}
void push(node_t *head, unsigned int value)
    node_t *ptr = head;
    while (ptr->next != NULL)
        ptr = ptr->next;
    }
    ptr->next = create_list(value);
}
void free_list(node_t *head)
    node_t *temp = NULL;
    while (head != NULL)
        temp = head;
        head = head->next;
        free(temp);
    }
}
void iterate_list(node_t *head, void (*func)(node_t *))
    while (head != NULL)
        func(head);
        head = head->next;
```

```
void print_node(node_t *node)
    if (node->next != NULL)
        printf("%d, ", node->value);
    }
    else
    {
        printf("%d", node->value);
}
void print_list(node_t *head)
    printf("[");
    iterate_list(head, print_node);
    printf("]\n");
}
node_t *get_middle(node_t *head)
{
    node_t *slow = head;
    node_t *fast = head;
   while (fast != NULL && fast->next != NULL && fast->next != NULL)
    {
        slow = slow->next;
        fast = fast->next->next;
    }
    return slow;
void insert_at(node_t *node, node_t *inserted_list)
    if (node->next == NULL)
    {
        return;
    }
    node_t *temp = node->next;
    while (inserted_list != NULL && inserted_list->next != NULL)
    {
        node->next = inserted_list;
        inserted list = inserted list->next;
        node = node->next;
    }
    node->next = inserted_list;
    inserted_list->next = temp;
}
node_t *read_list(int size)
{
   node_t *list = NULL;
```

```
while (size > 0)
        unsigned int value;
        scanf("%d", &value);
        if (list == NULL)
        {
            list = create_list(value);
        }
        else
        {
            push(list, value);
        size--;
    return list;
int main()
{
    int n;
    printf("Input n: \n");
    scanf("%d", &n);
    printf("Input %d elements of main list\n", 2 * n);
    node_t *main_list = read_list(2 * n);
    printf("Input %d elements of inserted list\n", n);
    node_t *inserted_list = read_list(n);
    printf("Original main list\n");
    print_list(main_list);
    printf("List to insert\n");
    print_list(inserted_list);
    insert_at(get_middle(main_list), inserted_list);
    printf("List after insertion\n");
    print_list(main_list);
    free_list(main_list);
    return 0;
```

Результати тестувань:

Строки, що починаються з #, є коментарями й не входять в ввід програми. Результати також виведені в текстовому форматі задля легшої перевірки через пошук тексту
